Video Solutions for Multicast Networks

Set-Top Box (STB) Manager

Set-Top Box (STB) Manager is a network utility which gives you the ability to control several set-top boxes in one browser-based interface.

Using a simple and intuitive GUI, several set-top boxes can be administrated from a central location in your multicast network. Currently, Amino's AmiNET130 series and mini-computers with similar video presentation capabilities are supported, but the system is easily extendable for other devices.

The interface has several abilities, such as:

Monitoring the current connection status of the STB's. Remotely rebooting a problematic device. Grouping the streamed videos for automatic switching during viewing.
